

Latest Trends and Outlook for Maritime Industry in Europe

유럽 조선해양기자재산업 동향과 협력전략 (자유토론)
Preliminary

Kormarine Conference 2024

13 November 2024 @Busan

Prof. Kang-Ki LEE

1

**A Future Scenario for Fuels on Green Shipping Corridor
Gap between production/supply versus demand for Sustainability**

2

**Maritime Fuels and Environment makes Trend!
Conditions to be maritime fuels and its evolution**

3

**Brainstorming
DNA: Europe vs Korea**

Disclaimer : All data provided on the following slides are for information & educational purpose only, explicitly non-binding and subject to changes without further notice so that there is no legal responsibility and what else use such as commercial and/or promotional use are not permitted. This material and information to present are sourced from sales purposed text and images available on industrial publicity and further with complements of sources & open press cuts. Most of information and illustration are provided complimentary by AVL unless sources are specifically given.

An aerial photograph of a large, active port facility. The water is a deep blue, and numerous large cargo ships are docked at the piers. The port is filled with colorful shipping containers and cranes. In the background, there are green hills and a city skyline. The text "Green Shipping Corridor → Sustainable Port Policy" is overlaid in white on the image.

Green Shipping Corridor → Sustainable Port Policy

EU Emission Trading System (ETS) 2024

The EU Emissions Trading System (EU ETS) requires polluters to pay for their greenhouse gas (GHG) emissions; launched in 2005, started covering emissions from maritime transport in 2024.

Fuel Sustainability Evolution of Maritime Fuels

Price-Competitiveness, Safety and Availability + Environment

• 7,000DWT Cargo & Passengership (M/V Selandia)
- 2 x 8cyl., 4cycle, 1,250hp

2 TOTE 3,100teu Container ship by 8L70ME-C8.2-GI
2 Teekay 173K LNG Carrier
Powered by 2 x 5G70ME-C9.2-GI

- Only 1 Oil Station
- Ship Dieselization: ~20years

1812 – steam (reciprocating) engine
(cf: 1894- World first steam turbine-powered steamship: Turbine)

World first diesel engine ship : M/S Selandia

- Several Gas Stations
- Innovative Technology on S, T, L & E
- Electronic Engine
- Scale Economy on Ships in Number.

World first LNG fuelled container ship designed by DSEC

Green Way on Ocean Going ships

Progression of Complexity: Still depends on the key role of ICE

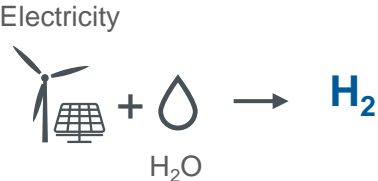

Today	Bunker Fuel	Power Generation	Prime Mover	Propulsion System
	<ul style="list-style-type: none"> ▪ HFO (dominantly) ▪ MDO/MGO 	<ul style="list-style-type: none"> ▪ Aux. Diesel Gensets ▪ DF Gensets 	<ul style="list-style-type: none"> ▪ 2-St, 4-St Diesel (HFO) ▪ DF Engines 	<ul style="list-style-type: none"> ▪ Mechanical Propulsion ▪ Electric Propulsion
2030-2050	<ul style="list-style-type: none"> ▪ Hydrogen ▪ Ammonia ▪ Methanol ▪ LNG ▪ SNG (Syn. Methane) ▪ LPG ▪ Biofuel, HVO, etc. 	<ul style="list-style-type: none"> ▪ LNG, H2, Gensets ▪ Hybrid Power System ▪ Fuel Cell System ▪ Alternate Marine Power (AMP) – „Cold Ironing“ 	<ul style="list-style-type: none"> ▪ DF Engines ▪ Multi Fuel Capability ▪ Wind Power ▪ SCR, EGR, Scrubber ▪ WHR Systems - CCUS/ORC ▪ Fuel Cell/Electrolysis ▪ Hybrid PTI/PTO 	<ul style="list-style-type: none"> ▪ Electric propulsion-Battery ▪ Hybrid Propulsion Syst. (w/shaft generator) <ul style="list-style-type: none"> – PTO (Transit, parallel, shore connection mode) – PTI (Diesel electric, fully electric, boost mode) ▪ Hybrid/Electrification
	Fit to rules but go for H ₂		Integration of Energy systems & LCA – ICE+FC/Electrolizer+CCUS+Wind+Nuclear	

Future Fuels for Sustainability

Production | Properties | Applications

Source: AVL List GmbH

Carbon-free Fuels		Carbon-neutral Fuels		
Hydrogen H ₂	Ammonia NH ₃	Methane CH ₄	Alcohols CH ₃ -(CH ₂)-OH	Paraffins C _n H _{2n+2}
				
<p>+</p> <ul style="list-style-type: none"> Production Efficiency Flexibility: Engine; PEM FC Future Availability (Industry) Good Fuel Properties 	<p>+</p> <ul style="list-style-type: none"> Storage as Liquid Gas Best Carbon free H₂ Carrier 	<p>+</p> <ul style="list-style-type: none"> Available Technologies and Infrastructure 	<p>+</p> <ul style="list-style-type: none"> Liquid → Acceptable Storage Density 	<p>+</p> <ul style="list-style-type: none"> Available Technologies and Infrastructure Best Storage Density Highest Engine Efficiencies
<p>-</p> <ul style="list-style-type: none"> Storage Density Safety due to high Reactivity 	<p>-</p> <ul style="list-style-type: none"> Toxic Corrosive Poor Fuel Properties 	<p>-</p> <ul style="list-style-type: none"> Upstream Emissions (CH₄) Energy Demand in case of Liquefaction (LNG) 	<p>-</p> <ul style="list-style-type: none"> Ethanol: Dependence from Bio-Source 	<p>-</p> <ul style="list-style-type: none"> Poor Production Efficiency
<p>Electrolysis</p> 	<p>Haber-Bosch Process</p> 	<p>RNG: Methanation</p>  <p>BNG: Bio-Fuel Production</p> 	<p>Bio Alcohol / Synthesis</p>  <p>Methanol: Gasification of biomaterialia + Synthesis or Methanol synthesis Ethanol: Sugar Fermentation</p>	<p>E-Fuel (e.g. Fischer Tropsch)</p>  <p>HVO: Isomerization</p> 

The challenges remain – **we are not on track.** Collaborative action is needed!

Brainstorming Maritime Cooperation

Europe - Owning

- Financial Investment
- Legislation, Rule Making
- Shipping/Offshore Plants – Owners, Charterers
- Shipbuilding – High Value (Cruise), Inland, Special Purpose Ships
- Equipment – Hi-Tech
- Engine OEM – HS with New Fuels
- Technology Providers

Korea - Building

- Shipping/Offshore Plants – Owners, Charterers
- Shipbuilding – High Value (LNG)
- Equipment – Hi-Quality, Cost benefit, Short Delivery
- Engine OEM – LS, MS with New Fuels
- Design
- Etc.

Cooperation
